Front-End Developer with a strong Foundation in Technology and Frameworks of today's Standards like React, JavaScript, etc. I have done my graduation in Computer Science Engineering with a specialization in web development. I also build and worked on many real-time projects with CRUD operations and also Using various API's I have a proven ability to collaborate effectively with senior developers while spending extra time to be mentored.

📊 Projects

1) Expense Tracker: ↗

• An React application that can be used to track day to day expenses.
• Friendly and responsive user interface.
• Uses concept of react like state, props and props drilling.

2) Mini Games Studio: ↗

• A JavaScript application where one can play various old retro games.
• The games are also responsible, so one can play on mobile devices.
• Some games also fetch the data from API to make the experience Dynamic.

3) Resume Builder: ↗

• A multi-page React application that can be used to create Resumes (Specially for freshers)
• This application uses tools and frameworks like Redux toolkit and Bootstrap.
• This application will take the input from the users and generate a Resume.

4) Movies Palace: ↗

• This application is built by using HTML, CSS and JavaScript.
• This application will provide you details of the latest movies and their ratings.
• This application uses API to fetch the latest movies all the time.

5) Personal Portfolio: ↗

• This is my personal website built using React JS.
• This application showcases all of my experiences and projects with live Links.
• This application also provides my personal and contact information.
